

Discovered in 1940

Discovered by
Dale R. Corson,
Kenneth Ross
MacKenzie and
Emilio Segrè

it is estimated that
there is no more
than twenty-eight
grams of astatine
on Earth at any
time

The name comes
from the Greek
'astatos', meaning
unstable

Astatine

At

85

Mass spectrometry has been used to
confirm that astatine behaves
chemically like other halogens,
particularly iodine
