

Discovered in 2010

Discovered by Scientists from the Joint Institute for Nuclear Research in Dubna, Russia, the Lawrence Livermore National Laboratory in California, USA, and Oak Ridge National Laboratory in Tennessee, USA

In January 2016 the discovery of Moscovium was recognized by IUPAC

The name refers to the Moscow region, where the Joint Institute of Nuclear Research is present

Moscovium

Mc

115

Moscovium is a highly radioactive element: its most stable known isotope, Moscovium-290, has a half-life of only 0.65 seconds
