

Discovered in 2000

Scientists from the Joint Institute for Nuclear Research in Dubna, Russia and the Lawrence Livermore National Laboratory, California, USA

Livermorium is made by bombarding curium atoms with calcium

Named after the Lawrence Livermore National Laboratory

Livermorium

LV

116

Four isotopes of Livermorium have been created with mass numbers from 290 to 293. The longest-lived is 293 with a half-life of 61 milliseconds
