

Neptunium

Np
93

Discovered in 1940

Discovered by
Edwin McMillan and
Philip Abelson

Neptunium is
pyrophoric, i.e. capable
of spontaneously
catching fire at room
temperature.

Neptunium was
named after the
planet Neptune

Neptune is the next planet out from
the Sun after Uranus, just like
neptunium is the next element in the
periodic table after uranium!
